TECH TIP

Is your water bottle filling up with water?

Water leaking out of the on/off toggle?

Air in the water?

One of the more common failures of water bottle systems is the routing valve. Routing toggles are used in multiple places on the water bottle system; the purge, bottle selector and city/bottle selector. A failure of the purge can cause an air/water crossover condition while a failure of the city/bottle switch can cause a bottle to fill up, resulting in water getting into the on/off toggle and leaking out. Replace routing valve with PN 7001.
